¹Estimate based on UC Pest Management Guidelines (http://www.ipm.ucdavis.edu/PMG/r3300411.html) model for % ant damage to almonds on the ground. Estimate assumes yield of 2,000 lb/A with model predicted loss of 7% after 21 days of moderate fire ant infestation (moderate=45 colony Entrances per 5,000 sq. ft. in April–May). (Note: PMG/r3300411.html revised: January 23, 2013.)
Faster Control of Fire Ants with Altrevin™

- Altrevin 1.5 lb/A
- Clinch 1.0 lb/A
- Untreated Check

Shafter, CA 2012 David Haviland (UCCE–Kern County)

Long Window of Control of Fire Ants with Altrevin

- Altrevin 1.5 lb/A
- Clinch 1.0 lb/A
- Untreated Check

Fort Pierce, FL 2006

Best Use Recommendations

**Use Rate:**
*Broadcast Applications:* 1.5 lbs/Acre

**PHI:** 5 days

**Registered For:** Almonds, Pecans, Citrus, Grapes and other Tree Nuts

- Apply when fire ants are actively foraging
- Wait 7 days before using contact insecticides
- Retreat after 4–8 weeks if necessary
- DO NOT apply more than 6 lbs/A per year

Always read and follow label directions.
