

Beyond Herbicide Tank-Mixtures for use in Clearfield Plus Wheat

Clearfield Plus Varieties

- Allows the use of Beyond Herbicide with crop oil concentrates (COC) and methylated seed oil adjuvants (MSO)
- Beyond Herbicide is often tank mixed with broadleaf herbicides to improve weed control
- Some broadleaf herbicides either do not require adjuvants, or recommend the use of non-ionic surfactant
- The use of adjuvants with some broadleaf herbicides may result in increased crop phytotoxicity

Based on research and broadleaf herbicide labels, the following herbicides may be tank-mixed with Beyond Herbicide plus COC/MSO adjuvants in **Clearfield Plus** wheat varieties. **Refer to the product labels for rate information and any restrictions.**

- **Huskie®**
- **Starane Ultra®**
- **Widematch®**
- Pre-formulated (not tank-mixed) Octanoic bromoxynil 2.0 lb ai/gal + MCPA ester 2.0 lb ai/gal (such as **Brox®-M**)

Tank mixtures with Beyond Herbicide may not contain more than one of the above listed herbicides. Any crop injury occurring from spray overlaps is the responsibility of the applicator. It must be noted that products with the same active ingredients often have different label statements regarding adjuvant restrictions. It is the responsibility of the pesticide applicator to read the labels and verify that the above mentioned herbicides do not prohibit the use of COC/MSO.

Always read and follow label directions
