Fungicide

## Use Guide for Cotton

### Benefits of Headline® Fungicide

- Effective control of key foliar diseases
- Improves yield and minimizes risk
- Provides Plant Health benefits for cotton

### Foliar Diseases are Found in Most Georgia Cotton Fields

Target Spot

Ascochyta Leaf Spot

Stemphylium Leaf Spot

### Headline Fungicide Controls Foliar Diseases in Cotton

Untreated

## Factors that Improve the Odds of Success and Yield Increases with Headline® Fungicide on Cotton

Foliar diseases of cotton are found in most cotton fields in Georgia and Alabama. Target Spot is especially widespread, can cause significant yield loss and is not linked to fertility deficiencies. Recent university field trials have shown Headline fungicide can reduce the severity of this disease and others, protect cotton leaves and improve yield.

### If any of these factors below are present on your farm, applications of fungicides may be beneficial

- Have you or your neighbors had a problem within the past several years with disease on your cotton leaves? Symptoms include leaf spots and premature defoliation.
- Are you planting cotton behind cotton? Or on a short rotation?
- Is the weather favorable for disease development? Are afternoon showers in the forecast? Is a tropical storm forecast to impact the area?
- Is your cotton irrigated?
- Is your cotton managed for high yields?
- Is your cotton a full season variety?

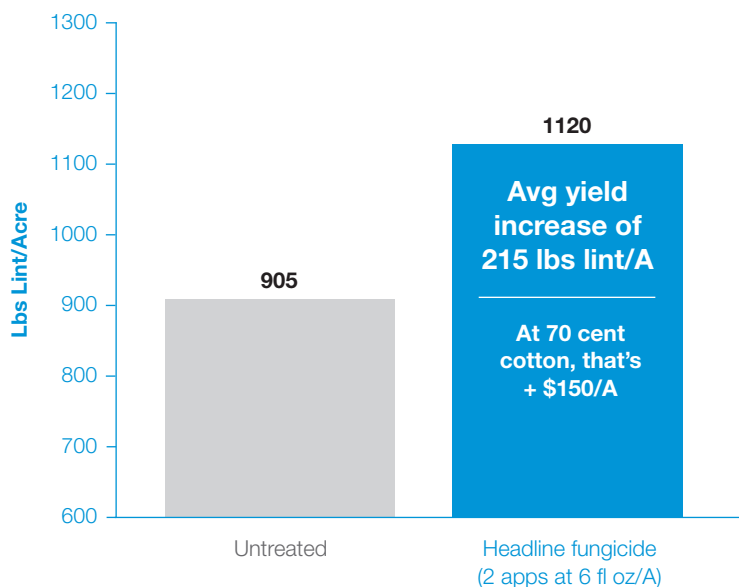

## Best Use Recommendations

- Use Rate: 6.0 fl oz/A
- Application Timing: 1<sup>st</sup> week of bloom; again 2–3 weeks later

### Target Diseases

- Alternaria leaf spot and boll rot
- Anthracnose boll rot
- Ascochyta blight and boll rot
- Cercospora blight and leaf spot
- Target spot
- Diplodia boll rot
- Fusarium hard lock
- Phoma blight
- Rust
- Stemphylium leaf spot

### Headline Fungicide: Solution for Target Spot

2012-2013. Average of 3 large plot on-farm replicated field trials from AL and GA.
