

Prowl® H2O

Herbicide

Prowl H2O Herbicide for Field Corn

Benefits of Prowl® H2O Herbicide

- Controls over 50 important grass and broadleaf weeds
- Provides residual control of both glyphosate and HPPD resistant waterhemp and palmer amaranth
- Water-based encapsulation easily washes off residue to control germinating weeds
- Low water solubility makes Prowl H2O ideal for residual weed control under irrigation and on coarse soils

Prowl H2O combines a unique site-of-action for weed control with the flexibility of Preemergence or Postemergence application

Prowl H2O Use Rates for Preemergent and Postemergent Applications to Corn

Soil Texture*	Organic Matter		
	<1.5% (pints/A)	1.5%–3.0% (pints/A)	>3.0% (pints/A)
Coarse	2.0	3.0	3.0
Medium	3.0	3.0	4.0
Fine	3.0	4.0	

*Refer to label for soil texture classifications.

Key Weeds Controlled (Partial List)

Grasses	Broadleaves
Barnyardgrass, Field sandbur Crabgrass, Panicum (fall), Foxtail spp., Sandbur (field)	Amaranth, Palmer, Lambsquarters (common), Pigweed spp., Purslane Kochia, Waterhemp

Technical Information Bulletin

 **BASF**
The Chemical Company

Prowl H20[®] may be used either Preemergence or Postemergence in corn to control weeds as they germinate and before they emerge from the soil.

Best Use Recommendations

Preemergence

- Apply after planting but before weeds and crop emerge
- Planting depth must be at least 1.5" deep and seed must be completely covered with soil
- Tank-mix with Sharpen[®] herbicide for enhanced burndown and residual broadleaf control. See Sharpen label for details.

Postemergence

- Apply Prowl H2O from spike to V8 or 30" tall corn, whichever is more restrictive
- Tank mix with Status[®] or Armezon[™] herbicides for control of emerged weeds. See Status and Armezon labels for details

Prowl H20 Tank Mixing Instructions

- Fill tank 1/2 to 3/4 full with clean water and agitate
- If tank mixing glyphosate, add ammonium sulfate and agitate
- Wettable Powder (WP) Formulations—make slurry in water and add slowly into the partially filled tank while agitating
- Dry Flowable (DF) / Water Dispersible Granule (WDG) formulations
- Flowable (F) formulations
- Add Prowl H2O to partially filled tank while agitating
- Water Soluble Concentrate (SC) formulations
- Emulsifiable Concentrate formulations, including non-ionic surfactants and oil-based adjuvants
