Status®
Herbicide

Status® Herbicide for Fast, Effective Control on Broadleaf Weed in Corn (Field, Pop, and Seed)

Benefits of Status Herbicide

Two Effective Sites of Action Plus a Corn Safener

Rapid, Effective Knockdown

- Unique combination of diflufenzopyr (DFFP) and dicamba
- DFFP concentrates natural auxin and dicamba in the growing points of weeds for faster control

Residual Control

- Use 5 oz/A or more for residual control
- Apply early–keep fields clean to canopy closure for maximum yield protection

Resistance Management

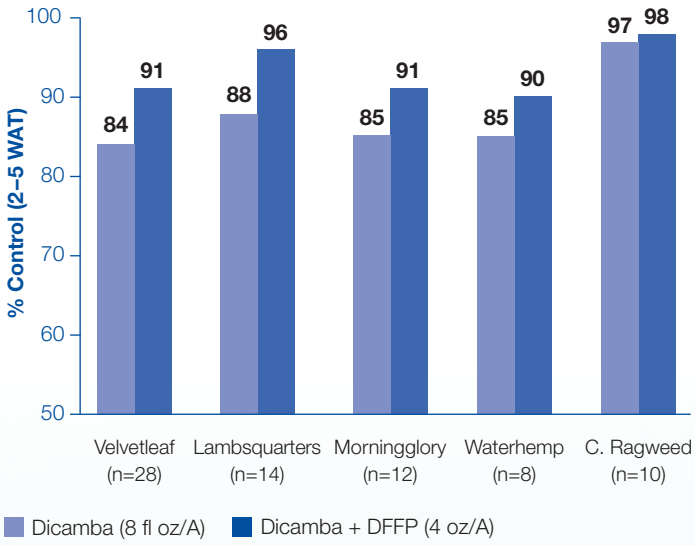
- Broad-spectrum broadleaf weed control–over 190 of the toughest broadleaf weeds in corn
- Controls ALS, triazine, PPO, HPPD, and glyphosate resistant broadleaf weeds

Proven Crop Safety

- The safener in Status herbicide has proven crop safety in corn (Field, Pop, and Seed)

Mid Post Broadleaf Weed Control

Dicamba + DFFP Herbicide vs. Dicamba Herbicide



Biology field trials 1994-1998. Application made to corn 8" to 18" tall. UAN (4% v/v) applied with Dicamba from Clarity® herbicide; NIS (0.25% v/v) + UAN (1.25% v/v) applied with Dicamba + DFFP from Status herbicide. DFFP: Diflufenzopyr.

Field Performance of Status® Herbicide

Day of Application

Status Herbicide + Glyphosate + NIS + AMS – 2 WAT

Commercial application. Anthony, North Dakota, 2008.

Best Use Recommendations

Application Rates: Status herbicide (5–10 oz/A)[1] + recommended rate of glyphosate[2]

Application Timing: V2–V10; 4"–36" tall corn

Application Requirements:

- **Adjuvants:** NIS (1 quart/100 gals) + AMS (8.5–17 lbs/100 gals) **OR** COC/MSO (1–2 pints/A) + AMS (8.5–17 lbs/100 gals)
- Minimum 10 GPA carrier volume. Increase volume for heavy residue and/or weed pressure

1. Use minimum of 5 oz/A for suspected/known glyphosate resistant weeds
2. Requires glyphosate tolerant corn

Steward your Status Herbicide using On Target Application Practices

Nozzle Giveaway Program Through BASF

- Extremely coarse to ultra coarse droplet spectrum

Deposition Agent

- Deposition agents help reduce fine spray droplets
- Check with your local retailer for a deposition agent compatible with air induction nozzles

Air Speed and Direction

- Base your decision to spray on conditions at the time of application

ON TARGET APPLICATION ACADEMY

Advantages of Dicamba + DFFP in Status Herbicide:

- Controls larger weeds, faster than dicamba alone
- Residual weed control with two POST sites of action
- Elite corn safety with Status herbicide safener package
- Better control of Amaranthus sp. than with dicamba alone
- Better at perennial weed control than dicamba alone
- Increases peroxide/tissue damage, controls weeds faster
- Speed of control faster than dicamba alone
- Over 50 years as the industry leaders in dicamba technology and application stewardship
- Enhances glyphosate weed control
