Swift Activity

Veltyma™ fungicide’s fast uptake and strong curative activity stops yield limiting diseases in their tracks.

Simple Application

Veltyma fungicide’s wider application window gives you flexibility to apply by ground or air, and it still outperforms the competition.

Secure Decision

Veltyma fungicide’s long-lasting control of both disease and environmental stress is easy to see and gives you more certainty in your fungicide decision.

Veltyma™ Fungicide

Active Ingredients
Mefentrifluconazole – Group 3
Pyraclostrobin – Group 11

Formulation
Suspension concentrate (SC)

Product Packaging
2 x 2.5 gallons
250 gallon mini bulk

Storage
Store above 32°F

Bulk Density
9.513 lbs/gal

Application Tips
Rainfast: When dry
REI: 12 hours
PHI: 21 days for corn (all types) and soybean
Adjuvant: Can be used to improve coverage†
Nozzle, droplet size: Flat fan, fine to medium

Water Volume
Aerial: Minimum 2 gpa spray volume
Ground: Minimum 10 gpa spray volume
Chemigation: DO NOT apply more than 1/2 inch per acre
DO NOT apply in spray solutions less than 50% water by volume

Recommended Timings on Crops*

Tank Mixes and Additives
Veltyma fungicide can be tank mixed with other fungicides, insecticides, herbicides, liquid fertilizers, biological control products, adjuvants, and additives. Always follow the most restrictive label use directions. Consult a BASF representative or local agricultural authorities for more information on use of additives or adjuvants with this product.

Mixing Order
1. **Water:** Begin by agitating a thoroughly clean sprayer tank ¾ full of clean water
2. **Agitation:** Maintain constant agitation throughout mixing and application
3. **Products in PVA bags**
4. **Water-dispersible products**
   (products such as dry flowables, wettable powders, suspension concentrates such as Veltyma fungicide, or suspo-emulsions)
5. **Water-soluble products**
6. **Emulsifiable concentrates**
   (or oil concentrates when applicable)
7. **Water-soluble additives**
   (such as ammonium sulfate [AMS] or urea ammonium nitrate [UAN] when applicable)
8. **Nutritional**
9. **Remaining quantity of water**

Adjuvant Use Limitation on Corn
Adjuvant crop damage can occur when an adjuvant is used after the V8 stage and before the VT stage (the VT stage is defined as when the tassel’s last branch is completely visible outside the whorl). If an adjuvant is used after the V8 stage and before the VT stage, the grower and the user are responsible for contacting the adjuvant source (adjuvant distributor, retailer, or manufacturer) for advice and confirmation that the adjuvant has been tested and proved to be safe for application from the V8 to VT corn stages. Refer to the adjuvant label for specific use directions and restrictions. Always follow the most restrictive label.
