

2025 InVigor Hybrid Canola Seed Treatment Options

Built on dependability.

At BASF, we pride ourselves on our commitment to drive innovation and meet customer needs. The 2025 InVigor® hybrid canola lineup is our strongest yet, and now includes more seed treatment options than ever before. Helix® Vibrance® is our base seed treatment, with options for Lumiderm™ insecticide seed treatment or BUTEO® start for higher flea beetle pressure.

		
Helix® Vibrance® foundation seed treatment with four fungicides and a powerful insecticide delivers broad-spectrum pest protection, including seed-borne blackleg.	BUTEO® start is the powerful protection your canola seed needs against flea beetle pressure. Its rapid uptake and systemic translocation from cotyledon to leaf margins allows for a strong plant right off the start, even in dry conditions.	Lumiderm™ insecticide seed treatment provides excellent plant protection against both flea beetles and cutworms.

Seed treatment options will vary by hybrid. Here is the early indication of seed treatment options available by hybrid. Talk to your BASF Authorized Retailer soon to secure seed treatment solutions for your farm.

		Seed Treatment Options		
Hybrid	Key Features	Helix® Vibrance®	Helix® Vibrance® + BUTEO® start	Helix® Vibrance® + Lumiderm™
