INVIGOR
HYBRID CANOLA
InVigor L234PC

Canola seed hybrid performance comparison.

InVigor[®] hybrid canola from BASF continues to lead yield rankings in field trials across the country. With consistently strong yield potential and exciting new traits to help improve harvestability, InVigor gives you the confidence to grow more.

InVigor L234PC

InVigor L234PC boasts the patented Pod Shatter Reduction technology you trust along with second-generation clubroot resistance to additional emerging clubroot pathotypes to help combat the ever-evolving clubroot pathogen. Second-generation clubroot resistance is designed to combat clubroot in fields that still show signs of the disease or are starting to show signs, despite seeding a first-generation clubroot-resistant hybrid as part of an integrated management plan. Clubroot populations in the field can evolve or shift to new pathotypes that current resistant hybrids may be susceptible to. To maximize the durability of genetic resistance in canola hybrids, use an integrated pest management strategy that includes extending rotations in areas where clubroot is a concern.

Protect your investment with outstanding weed control.

InVigor hybrids are bred with the LibertyLink trait for built-in tolerance to Liberty herbicide. This fast-acting control allows growers to rotate non-selective herbicide systems and effectively manage tough-to-control weeds.
