INVIGOR
HYBRID CANOLA
InVigor L340PC

Canola seed hybrid performance comparison.

InVigor® hybrid canola from BASF continues to lead yield rankings in field trials across the country. With consistently strong yield potential and exciting new traits to help improve harvestability, InVigor gives you the confidence to grow more.

InVigor L340PC

An exciting 300 series hybrid for growers that want it all. A high yield potential, mid-maturing, Pod Shatter Reduction hybrid that offers first-generation clubroot resistance and strong standability.

InVigor® L340PC	Yield	108.9% of the new checks (InVigor L233P and Pioneer® 45H33) in 2019 WCC/RRC ¹ trials 107.8% of InVigor L233P (n=16 trials, 2019)
	Traits	Patented Pod Shatter Reduction technology First-generation clubroot resistance LibertyLink® technology system
	Growing Zones	All growing zones in the U.S. spring canola market
	Standability	Strong
	Maturity	1 day earlier than InVigor L252
	Blackleg	R – Blackleg-resistant

Please note: Maturity and standability are based on performance ratings and data compiled from several InVigor internal trials over multiple years. Results may vary on your farm due to environmental factors and preferred management practices.

n=number of balanced trials.

¹Western Canadian Canola/Rapeseed Recommending Committee.

Straight Cut and Swathed Trials InVigor L340PC vs. Competitors

BASF conducts large plot replicated canola trials across the spring canola growing area in the U.S. These are unique trials in that they are conducted with grower cooperators and are replicated large plot trials.

InVigor L340PC out yielded Dekalb® DKTFL 21SC and Dekalb DKLL 82SC in these large plot canola trials by an average of 6% across 8 locations.

Results may vary on your farm due to environmental factors and preferred management practices.

Results November 3, 2020.

Protect your investment with outstanding weed control.

InVigor hybrids are bred with the LibertyLink trait for built-in tolerance to Liberty herbicide. This fast-acting control allows growers to rotate non-selective herbicide systems and effectively manage tough-to-control weeds.
