INVIGOR
HYBRID CANOLA
NEW FOR 2022
InVigor L343PC

Canola seed hybrid performance comparison.

InVigor[®] hybrid canola from BASF continues to lead yield rankings in field trials across the country. With consistently strong yield potential and exciting new traits to help improve harvestability, InVigor gives you the confidence to grow more.

InVigor L343PC

New InVigor L343PC combines performance with protection. This high-yielding Pod Shatter Reduction hybrid contains second-generation clubroot resistance and offers a significant yield increase over InVigor L234PC plus improved standability.

We recommend growing InVigor L343PC with second-generation clubroot resistance in clubroot-affected areas after two cycles of growing first-generation clubroot-resistant hybrids or when clubroot symptoms appear in first-generation clubroot-resistant hybrids.

NEW InVigor[®] L343PC	Yield	111.3% of the checks (InVigor L233P and Pioneer [®] 45H33) in 2019 & 2020 WCC/RRC ¹ trials 106% of InVigor L233P (n=43 2019 & 2020)
	Traits	Patented Pod Shatter Reduction technology Second-generation clubroot resistance LibertyLink [®] technology system
	Growing Zones	All growing zones in the U.S. spring canola market
	Standability	Strong
	Maturity	1 day later than InVigor L234PC
	Blackleg	R – Blackleg-resistant

Please note: Maturity and standability are based on performance ratings and data compiled from several InVigor internal trials over multiple years. Results may vary on your farm due to environmental factors and preferred management practices.

n=number of balanced trials.

¹Western Canadian Canola/Rapeseed Recommending Committee.

InVigor helps manage clubroot resistance.

Clubroot can cause major yield loss in canola. Implementing an integrated pest management system by including a hybrid with built-in resistance is an excellent way to help manage the disease and maximize and protect yield potential. New InVigor L343PC is engineered to help prevent clubroot development.

Protect your investment with outstanding weed control.

InVigor hybrids are bred with the LibertyLink trait for built-in tolerance to Liberty® herbicide. This fast-acting control allows growers to rotate non-selective herbicide systems and effectively manage tough-to-control weeds.
