

Introducing the NEW Standard for Early Blight Control in Potatoes

Provysol™ Fungicide Guidelines for Use in Potatoes

- **Active Ingredient:** Mefentrifluconazole (FRAC 3)
- **Crop:** Potatoes
- **Target Disease:** Early Blight, Brown Spot, Black Dot
- **Optimal Timing:** Crop row closure, prior to onset of disease
- **Use Rate:** 3-5 oz/A
- **Application Method:** Ground, Air, or Chemigation
- **Optimal Spray Volume:** Enough for complete coverage. 20 GPA (ground) or 5 GPA (aerial).
- **Tank-Mix:** Can be tank-mixed with most commonly-used white mold and late blight fungicides
- **Re-Entry Interval:** 12 hours
- **Preharvest Interval:** 7 days

This quick guide DOES NOT replace the need for a product label.
It is designed to supplement the product label.

Always read and follow label directions.
