

# Priaxor<sup>®</sup>

Xemium<sup>®</sup> Brand Fungicide

## Use in Tomatoes

### Benefits of Priaxor<sup>®</sup> Fungicide

- Driven by Xemium<sup>®</sup> Fungicide technology advantages
  - Broader activity across disease lifecycles
  - Continuous redistribution and extended residual protection
- Contains F500<sup>®</sup> – the #1 Plant Health Fungicide
- More consistent disease control helps maximize yield and quality potential

---

Priaxor provides more consistent disease control to help maximize yield and quality potential.

---

#### Priaxor Fungicide Use in Tomatoes

<b>Use Rates and Diseases</b>	4–8 fl oz/A: Black mold, Early blight, <i>Septoria</i> leaf spot, Target spot and Anthracnose
	6–8 fl oz/A: Powdery mildew
	4–8 fl oz/A: Suppression of <i>Botrytis</i> gray mold, <i>Sclerotinia</i> stem rot, White mold, and Late blight

# Best Management Practices

## Adjuvant Use and Tank Mixing with Priaxor® Fungicide

- Always consult a BASF representative before tank mixing products with Priaxor fungicide
- Effectiveness and safety of Priaxor fungicide in mixes depends on product, growth stage and other factors
- Do not mix with COC, MSO, OS, MSO/OS blends or emulsifiable concentrate (EC) formulation or solvent-based formulation products
- NIS can be used at their lowest labeled rates up to 0.125%

Target Spot

Powdery Mildew

Early Blight

Anthracnose

# Broad Spectrum Disease Activity

## Effective Control of Early Blight

2010 Steve Rideout – VA Tech University, Esarec, VA. Variety – BHN669. Applications made Jun 8, 18, 29, Jul 8, 20, 29, 10. Gavel applied with 0.25% nonionic surfactant. *Alternaria solani* inoculations made 4x. Disease assessed Aug 16, 2010.

## Target Spot of Tomato

Setting A New Standard with Priaxor Fungicide

2011, KAC Ag Research, Myakka City, FL. \*Nonionic surfactant used with both products.

Always read and follow label directions.
