Xemium® Brand Fungicide

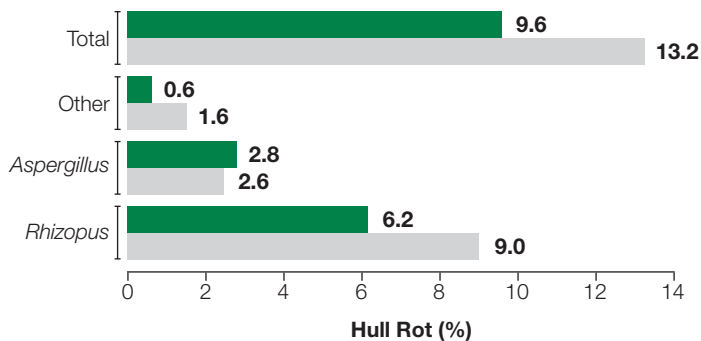

Help Your Trees Destress and Protect Your Orchard From Hull Rot

Hull split is a stressful time for almond trees. Between the summer heat, deficit irrigation, mite/insect pressure and a heavy nut load there are a lot of demands being put on your almond trees between hull split and harvest. Merivon® fungicide can help your trees take a load off with its Plant Health benefits proven to reduce stress and increase vigor in almonds.

Benefits of Merivon® Fungicide for Hull Rot

- Active on entire hull rot complex and summer diseases
- REI (12 hours) and favorable PHI (14 days) for harvest
- Advanced Plant Health benefits

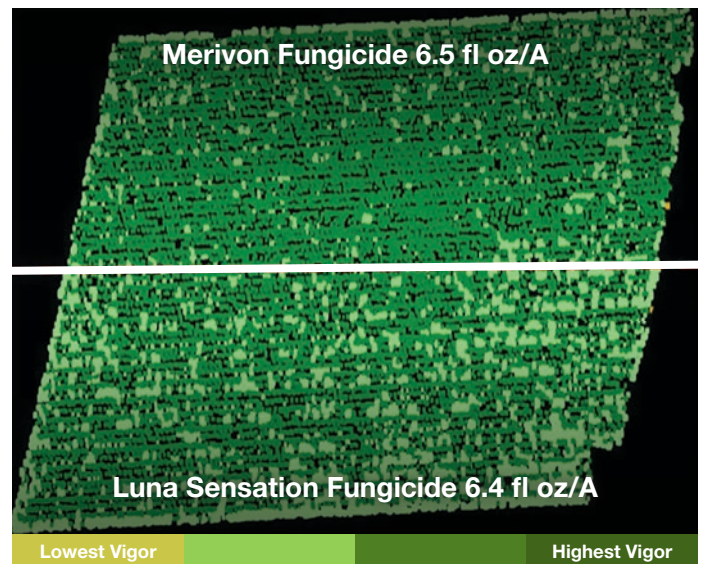

Hull Rot Incidence

Technical Information Bulletin

Protect Against Hull Rot

The hull rot complex in almonds consists of *Monilinia*, *Rhizopus* and *Aspergillus*. *Rhizopus* more commonly infects well-watered trees whereas *Aspergillus* is more common in drought-stressed trees. Even a small infection can increase mummies and impact future crops, significantly impacting your bottom line. With the heavy crop load and favorable environment, it's important to protect your orchard for years to come.

**Indicated by initial lab and field assays conducted by UC Extension.

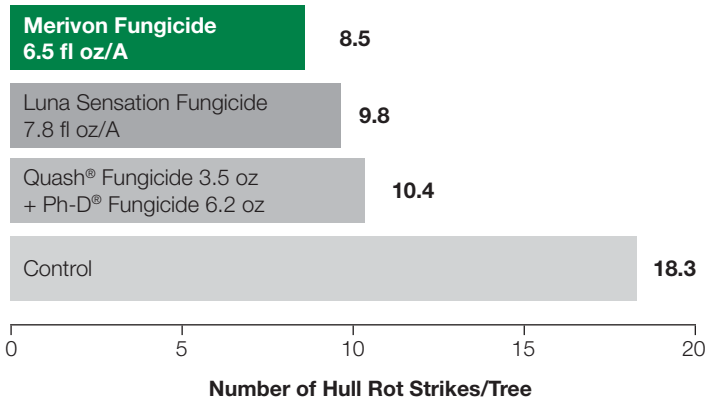

Merivon Fungicide Can Manage Hull Rot

With proven and consistent performance, Merivon fungicide can help manage the entire hull rot complex. In areas that experience summer diseases, like *Alternaria*, Merivon fungicide is an excellent choice for your hull split spray timing to have activity on hull rot and summer diseases.

For best results include Merivon fungicide as part of your Navel Orange Worm (NOW) spray at hull split.

Superior Almond Hull Rot Control with Merivon Fungicide
